## BEING AN ALMANACK

for the Year of our  
BLESSED SAVIOURS

Incarnation 1685

And from the Creation of the World according  
to the best of Ecclesiastical History 5634  
Benig the first after Bissextile or Leap-year.

Wherein is briefly shewed, the general State of the Year,  
the Solar Ingresses, Eclipses, Full Sea at London Bridge,  
Terms and these returns, the Sun and Moons rising and  
setting, with Astrological Observations, and the probable  
alteration of the Air.

Also the certain time of any Mare or Fair in any City or  
Town in England, with a description of the most emi-  
nent Roads therein.

To which is added Rules for Physick and Husbandry with  
many other usefull Observations necessary for the com-  
pleating such a work.

Calculated and referred to the Meridian of the famous  
University and Town of Cambridge; where the Pole  
Arctic is elevated above the Horizon 51.17. but may  
serve for any other part of Great Britain.

By Nathaniel Culpepper Student in Physick  
and the Celestial Science.

The Terms commence; conclude; and yet the strife  
Ends not: contention hath prodigious life  
And (which is worse) whose side the Conquest get,  
Gains but a lump of drowie after-wit.  
But O revenge I (he'll chat, although he begs)  
'Tis sweeter far, than Muscadine and Eggs. G. W.

## Culpepper 1685:

### *Of the Eclipses this Year 1685.*

**T**Here will be three Eclipses of the Luminaries this Year, viz. one of the Sun, and two of the Moon.

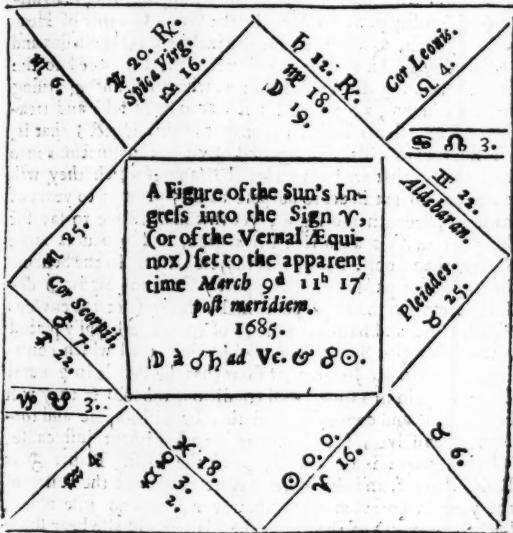

The first is of the Moon *June* the 6, at 40 min. past 5 in the afternoon, and therefore invisible to us in regard the Moon is not then above our Horizon, but 'twill be visible in the south east parts and a great Eclipse, being at least 18 digits obscur'd or darkened.

The second Eclipse will be of the Sun, the 21 of *June*, about 20 min. after 8 at night, but by reason of the Moons Parallax in Longitude it becomes invisible to us, and yet may be seen in the north west parts of the World at least half Eclipsed.

The third and last Eclipse is of the Moon the 30 of *November*, 28 min. past 10 at night, and may be seen and observed too if the Air be clear; The beginning should be at 8<sup>h</sup> 23'. 50". The beginning of total darkness at 9<sup>h</sup> 31' 50". The end of total darkness 11<sup>h</sup> 26'. 46". and the final end at 12<sup>h</sup> 34'. 48". p. m. The Digits Eclipsed will be at least 21, and the whole duration about 4 hours and near a quarter. Now concerning the Effects of these Eclipses, (or rather of this last that will be visible to us) I shall consider it briefly in the Judgement of the Year, and refer the Reader to such Annual Writers that have more room to expatiate their Conceptions thereon.

# Culpepper 1685.

**T**He Spring Quarter this year begins according to the Rudolphin Tables, March the 9<sup>th</sup>, at 8<sup>h</sup> 19' post mer. but by the Caroline Tables at 10<sup>h</sup> 36' 48" p.m. and by the Authors late correction about 40 minutes later, so that a Figure of Heaven for the first of these will produce about 24 degrees of  $\pi$  ascending; for the second, about 19 degrees of  $\pi$ , and for the third, about 25 degrees of the same Sign, which I shall present as followeth according to my usual method.

## Brief Observations upon the foregoing Scheme.

**S**uch is the Harmonious Order of the Visible World we see, that the Cœlestial Lights are either Fixed, or Erratick, which

Calpepper 1685.

which are vulgarly called Planets, and those are both Primary and Secondary. The Stars shine with their own proper innate Light as the Sun doth, who is in reality one of the Stars, and all consist (according to the Judgement of the Learned) of true and proper Elementary Fire, partly liquid, partly solid, the liquid being very fluid and moveable like to a flame: these Coelestial Bodies were not created in vaine, or only to be gaz'd at, but set in the Heavens for Signs and for seasons, and sometimes (by the Configurations and Motions) to admonish the sinfull World of many approaching Calamities, most justly powered down by the Great Creator of Heaven and Earth, as a scourge to chastize them for their sins and transgressions. This thing being premised, I proceed to the Consideration of the Vernal Figure, wherein I find  $\pi$  arising in the ascendant, a Sign most justly accounted false and treacherous by all persons that ever writ of this subject; that is, it Influences or distills strang kind of vicious Inclinations into most natives that are born under the same; which they will endeavour to put in act to purpose as they grow up to years of maturity, strength and vigor; yet this must I have to say for the Sign  $\pi$ , 'tis an active brisk Sign, and produces more Knaves than Fools, but of this subject *abster*. In the Scheme the Angles are partly Fixed and partly Common Signs,  $\Delta$  declines from the body of poor melancholly (not the envious Planet)  $\text{h}$ , and hastens to the  $\text{J}$  of  $\odot$ ,  $\text{X}$  is happily placed with the Virgins Spick, and many others; all which considered, doth in my Judgement shew that the People in general should remain in a dissatisfied condition, too subject they will be to repine and complain, and thereby discompose and torment themselves, (too many of them) without just cause. The ascendant is a Fixed Sign and the daring Planet  $\text{J}$  is Ruler thereof, and therefore may be accounted the Ruler of the year in a great measure, however  $\text{J}$  will not rule alone, but all (or most) of the rest of the Planets will also bear share in the dominion thereof. Now  $\text{J}$  as he is posited in a fiery Sign with the Scorpions heart, and in  $\text{m}$  to  $\text{h}$ , according to the Canons of Astrology bodes us but little good, or rather trouble and discontent in the highest degree, also sickness, scarcity,

## Culpepper 1685.

scarcity, and other disasters amongst mankind, too many, and those of dangerous consequence to be here enumerated, but more especially in those Countries and Kingdoms under the Sign ♄, as *Spain, Hungaria, Dalmatia*, and many other places in *Europe* and the Eastern parts of the World: We must expect also very great complaint for want of Trade, many break this present year, and suffer considerable damage in their estates, by losses and other casualties both in City and Country, many Quarrels, Duells, and malicious Controversies and Disputes arise between man and man, also much mischief done in several parts of our Nation by High-way-men and Robbers who should much abound this year, notwithstanding the strictest severity of Law to suppress them; and this is not all, for we are also threatned with unseasonable weather, and consequently very Lean Crops, and I fear a scarcity of the Fruits of the Earth, and diseases & rot amongst Cattle, which should much exhaust their price, to the great detriment of many Country men as well as the meaner sort of the Commonality. I have here a large field to walk in, and also matter enough to enlarge this Judgement very considerably, but since here is more of Gall than Honey, and little of Good portended, I shall forbear to insist any farther upon this unpleasant Theam and proceed to the consideration

### Of the Summer.

THE Summer Quarter begins this Year *June* the 10<sup>th</sup>, 53 minutes past 10 at night, at which time the Sun enters the Tropical Sign *Cancer*, & thereby makes the Longest days and Shortest nights unto us that live on the North side of the *Aequinoctial*. This Quarter is naturally hot and dry, and therefore those of a Chollerick constitution should be most subject to Diseases, and those which are Flegmatick more healthfull; (yet as the last year, so this I fear that most Constitutions may this Summer also tast of the Effects of some Epidemical Dissemper both in *England* and some neighbour Nations) and therefore to preserve Health, eat such meats as are easily digested, and rather rise with an appetite than

## Culpepper 1685.

over-charge the Stomach ; which now requires such cold meats which may moisten it and thereby mitigate the nature of the season. *Pulvis & umbra sumus.*

### Of Autumn.

**T**He *Autumnal Equinox* or Harvest Quarter begins when the Sun toucheth the first point of *Libra*, which this Year falls upon *Septemb.* the 12<sup>th</sup>, 14 min. past 2 in the afternoon, and then the Days and Nights are equal all over the World, (except under the Poles) This season is naturally cold and dry, and therefore those of a Sanguine Complexion should enjoy their health well, and the Melancholly Constitution most subject to diseases. Now you may eat what meat or fruit your Appetite desires, and 'tis also good to Purge and Bleed, and in your Broaths use Cordial powders, which will preserve the Body till the ensuing Spring.

### Of Winter.

**T**He Winter Quarter or *Solstice* begins always when the Sun having finished his greatest Southern Declination, makes his approach to us again ; and at the same time makes the greatest quantity of Shadow, and least portion of Sun-shine unto us, (as the contrary in all respects when he touches the Opposite or Northern Tropick) so that now the Sun touches the first scruple of *Capricorn* the days are shortest and the nights the longest with us, and this Quarter commences *December* the 11, 16 min. past 2 in the morning. The natural temperature of this Quarter is cold and moist, and therefore aged Phlegmatick Constitutions are most subject to distempers, and Youth and Chollerick persons enjoy their health best. In *December* Melancholly and Phlegm much abound and encrease in Humane bodies, therefore let all Persons be carefull to keep their heads and bodies as secure from cold as may be, and eat such Broaths or Meats as are of a hot quality ; and this is the way to preserve health, and consequently enjoy long life which most persons desire. For in the words of the Poet I say,

Death

## Culpepper 1685.

Death is a Pursuivant with Eagles wings,  
That knocks at poor mens doors, and gates of Kings.  
Worldling beware betimes, Death sculks behind thee,  
An as she leaves thee, so will Judgement find thee.  
Death is a Kalendar compos'd by Fate,  
Concerning all men, never out of date:  
Her days Dominical are writ in Bloud,  
She shews more bad days than she sheweth good,  
She tells when Days, when Months, and Terms expire,  
Measuring the lives of Mortals by her Squire.

F. Q.

---

An Account of the Planets Rising, Southing, and Setting this  
Year, of good use not onely to know them, but to find  
the Hour of the night.

*January.*  $\text{H}$  at the beginning hereof may be seen upon the meridian between 2 & 3 in the morning,  $\text{V}$  will be South about 2 hours and a quarter after  $\text{H}$ ,  $\text{J}$  Souths about 6 in the morning,  $\text{Q}$  rises before the Sun,  $\text{U}$  sets after the Sun and therefore may be seen at sometimes this month.

*February.*  $\text{H}$  at the latter end of this month may be seen in the South about mid-night, & rises about half an hour after 5,  $\text{V}$  Souths 2 hours and a quarter after  $\text{H}$ ,  $\text{J}$  will be South at 5 in the morning,  $\text{Q}$  rises before the Sun, and  $\text{U}$  lyes too near the Sun beams to be seen this month.

*March.*  $\text{H}$  Souths about 30 minutes past 10 at night, and sets about 5 in the morning.  $\text{V}$  towards the end of the month comes to the meridian about midnight,  $\text{J}$  will be South much about 4 in the morning, and he rises about midnight,  $\text{Q}$  and  $\text{U}$  keep together all this month, and rise before the Sun.

*April.*  $\text{H}$  comes upon the meridian at 9 at night, and sets near 4 in the morning,  $\text{V}$  marches after  $\text{H}$  and Souths about 2 hours after him,  $\text{Q}$  rises a little before the Sun; and  $\text{U}$  is hid by the Sun beams and therefore cannot be seen this month.

May.

## Culpepper 1685

**May.**  $\text{h}$  about the beginning of this month souths about 7 in the afternoon, and sets at 1 in the morning,  $\text{V}$  will be south near 9 at night,  $\text{J}$  comes to the meridian about mid-night,  $\text{Q}$  is hid by the Sun beams,  $\text{V}$  emerges out of the Sun beams, and may be seen after Sun set in the northwest part of the Heavens.

**June.**  $\text{h}$  this month follows  $\odot$  and sets about 11 at night,  $\text{V}$  sets an hour after,  $\text{J}$  souths about 10 at night,  $\text{Q}$  is near  $\odot$ , and so is  $\text{V}$ , and therefore cannot be seen this month.

**July.**  $\text{h}$  still follows  $\odot$  and sets about half an hour after 9 at night,  $\text{V}$  sets half an hour after 10 at night,  $\text{J}$  sets about midnight,  $\text{Q}$  &  $\text{V}$  keep near  $\odot$ , and therefore cannot be seen.

**August.**  $\text{h}$  sets between 7 & 8 at night, and  $\text{V}$  about an hour after, and  $\text{J}$  sets about an hour after  $\text{V}$ , and  $\text{Q}$  &  $\text{V}$  towards the months end emerge out of the Sun beams, but will very rarely be seen.

**September.**  $\text{h}$  at the beginning of the month keeps near to  $\odot$ , and becomes Combust, but gets out of his rays towards the end and rises before him,  $\text{J}$  sets near 10 at night,  $\text{V}$ ,  $\text{Q}$ , &  $\text{V}$  are very near together, and set after the Sun, but will very hardly be seen.

**October.**  $\text{h}$  this month riseth before break of day,  $\text{J}$  sets much about 9 at night,  $\text{V}$  falls under the rays of the Sun,  $\text{Q}$  is our evening Star, and sets an hour after the Sun, and  $\text{V}$  falls under the Sun beams, and is Combust.

**November.**  $\text{h}$  rises about 2 in the morning;  $\text{V}$  rises at day break,  $\text{J}$  danceth after the Sun and sets about 9 at night,  $\text{Q}$  doth also follow the Sun, and sets about 6 at night,  $\text{V}$  rises before  $\odot$ , at the beginning of the month, but towards the end hereof falls under the Sun beams again and cannot be seen.
